

**IN THE SPECIFICATION:**

*On page 7, please amend the paragraph beginning at line 13 as follows:*

--Figure [[1]] 2 depicts a dedicated mobile station 50 in a central serving cell 51 communicating with the base station 40 of that cell. By way of illustration only is shown a cluster of five adjacent cells 30 each having a first carrier frequency transceiving element denoted TRX1. Following the principles of reuse in a cellular telephone system such as GSM, each of the base stations 31 in the adjacent cells 30 operates at a different principal frequency. The number of adjacent cells is given by way of example only and in no way limits the invention to this number of cells.--
